

Dear Recruiter,

I have about five years of experience developing, coding, and testing Python and UniBasic applications. I am excited to bring my skills to Scalepex company as a L2 Supporter Engineer. I'm looking forward to helping Scalepex build dynamic software for your clients.

I currently work as a Software Developer at Mouser Electronics Inc. I wrote reusable, testable, and efficient code that meets our client's needs. One of my most successful projects included building functions and Subroutines for the ILI project in which the code I wrote received an API response from 3rd party Vendor named Cleartax and stored the tax amount for the invoice. In addition to my Python and UniBasic experience, I am also skilled in SQL and JavaScript.

I can help Scalepex company build user-friendly applications that exceed your client's expectations. I loved the work Scalepex company does for its clients around the world. I would channel that same innovation into my work as the Supporter Engineer.

I have attached my resume with more information about my education and experiences. Please feel free to also take a browse through my LinkedIn. I can be reached anytime by phone or email. I look forward to speaking with you soon.

Sincerely,

Apurba Chowdhury
